PROJECTS

Taskkit, — *React Native,Redux*

Most polished react native i've worked on

This Project was my first completed React native app, a Task management app, I started this project only for trying out react native and experiment a little bit with it, i used redux (state management library) for data persisting, it was not a good decision, I didn't know much about databases back then, So i had to do everything including inserting, updating, sorting, and managing relations you can check out the Github repo i used figma for prototyping.

Qalam, — *Go*

An Go library for easy terminal styling

This is my first open source library , a Terminal styling library. I built this library to make building terminal applications (TUI) in Go easier.

Weather App, — *React.js,node js*

My first react website

For this project I used open weather api to get weather data, and built a node js server that interacts with a mongodb to get the longitude and latitude for some cities (i used a free hosting tier to host the server so it will take time to cold start) I put more thought into design, animation and the overall experience, you can find about it more in the Github repo, since this website was one of my early projects there's some performance issues on low end devices.

EDUCATION

Omar Al-muktar university, Al bayda

October 2019 - present

Computer engineering

expected graduation 2024–2025

TECH I WORKED WITH

Typescript

React

React native

Golang

PostgreSql

Figma

LANGUAGES

Arabic: native

English: proficient
